

THE GREEN RESOURCE

PATIOS, WALKS AND WALLS... AN EXTENSION OF THE INDOORS

Just open the door and hours of pure relaxation are there for the taking. It may be an extension of your existing patio or a completely new area to relax in after a long day at work. It could be a walk that helps you move around your home or stroll to your secret garden place to get away from it all.

Pavers are the best way to create living spaces that bring the indoors out.

We create memorable entrances to homes and businesses that welcome and inspire. Imagine the **First impressions** of walks, patios and steps in matching or contrasting colors made with pavers. And Retaining Walls built with Celtik modular blocks (see photo below) will not deteriorate and are **Guaranteed for Life**.

Many properties around Tulsa have Rail Road Tie walls that are deteriorating and coming to

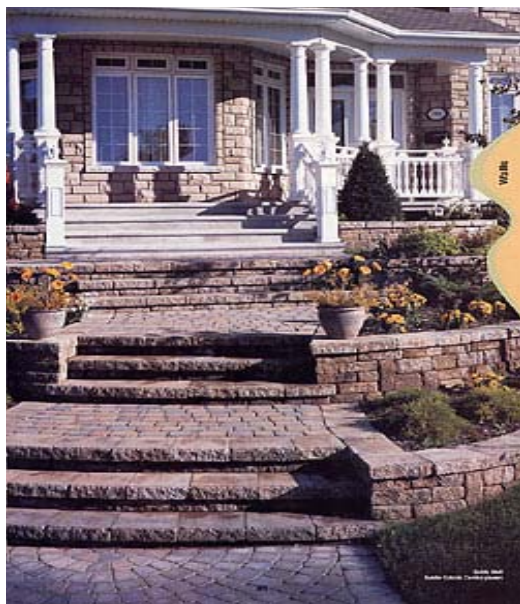

Mega-Bergerac Pavers – Gray

the end of their life. Segmented Walls end the need to replace RR ties every 15-20 years.

Never Replace Cement Again

While cement walks and drives will crack, chip and flake, **Pavers and Segmented / Modular Walls will never do this.** Why? Each piece of a wall, drive or patio moves with the freezing and thawing independently of the piece next to it so cracks in the surface can't form. Additionally, surface water drains away more completely so puddles are a thing of the past. Ever need to have utilities or other lines run under your cement work? **With pavers and segmented walls there is no need to cut the cement and patch it. Pavers are simply taken up as needed for utilities and replaced once the work is completed.** Consider adding to your deck or patio space this year. If your cement is cracked or your tie wall is coming apart, replace it once with pavers or segmented wall materials and **never worry about it again. Call today for a quote!**

Meet Our Hardscapes Expert, Stuart Walling

Announcing the newest addition to our team, Stuart Walling, an expert in Hardscape Construction. Stuart comes to us from Brady Nursery in Wichita, KS where he supervised landscape construction of all kinds. His particular expertise and love is “hardscape construction” which includes all walks, patios, retaining walls, decorative walls, water features and driveways. Stuart has over 10 years of experience in the landscaping business and is already a great asset to our company. Stuart will be performing TLC duties on your property and is very knowledgeable about your plants, diseases, insects and proper horticulture techniques.

Stuart is married to Penny and they have three school age children Tara, Randall, and Richie. When you meet Stuart welcome him to Tulsa.

NATIONAL CERTIFICATION ACHIEVED

Herndon, VA Dec. 5, 2003

What does Certification mean?

“Being certified lets clients know that we have the professionalism, knowledge, and qualifications they need to get the best value for their investment.”

Rick Doesburg, CCLP Pres., Thornton Gardens

When individuals are designated as “certified” professionals and specialists, the buying public places more value on what they do. Achieving certification in landscape contracting requires education, training, and testing. The company that employs certified staff has a competitive edge in its market because of the cachet that certification brings.

The Associated Landscape Contractors of America (ALCA) announced today that Randal D. Wise, CLP passed the Certified Landscape Professional (CLP) exam.

“For us this exam was the culmination of two years of preparation and planning. Our goal has always been to promote the growth and credibility of the landscape industry and Greenkeeper’s Landscapes in Northeast Oklahoma.”

“Our goal towards promoting professionalism is for all team members of Greenkeeper’s to achieve national certification levels of Certified Landscape Technician (CLT) or CLP,” said Randal Wise, President of Greenkeeper’s.

Marcia Higgins, Professional Standards Manager, ALCA said, ***“Certification is one area of common ground that clients can use to judge quality. In the long run, it saves the customer money because the contractors’ knowledge, skills, and abilities make them better able to meet contract specifications and successfully manage both the schedule and the budget.”***
